JC4616
apyrase (EC 3.6.1.5) precursor - potato
NyAlternate names: adenylpyrophosphatase; ATP-diphosphohydrolase
C;Species: Solanum tuberosum (potato)
C;Date: 10-May-1996 #sequence_revision 19-Jul-1996 #text_change 09-Jul-2004
C;Accession: JC4616; Pc4147
R;Handa, M.; Guidotti, G.
Biochem. Biophys. Res. Commun. 218, 916-923, 1996
A;Title: Purification and cloning of a soluble ATP-diphosphohydrolase (Apyrase) from pot
A;Accession: JC4616
A;Accession: JC4616
A;Accession: BC4147
A;Residues: 1-454 A;AAA>
A;Residues: 1-454 A;AAA>

J. Biol. Chem. 275:2057-2062(2000).

J. Chem. Chem. Could hydrolyze ATP and hype prevention of platelet aggregation.

Hydrolyzes ATP and ADP equally well.

J. CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

J. COPACTOR: Requires calcium and magnesium.

J. SUBURIT: Homodimer; disulfide-linked (By similarity).

J. SUBCELLULAR LOCATION: Integral membrane protein (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PTM: The N-terminus is blocked.
MISCELLANEOUS: Optimal pH is 7.0-7.5 with ATP as substrate and 7.5-8.0 with ADP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Robson S.C.; " " rargets CD39/endothelial ATP diphosphohydrolase to

(ytoganet. Cell Genet. 81:287-289(1998).

-I-FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-I-CATALYTIC ACTIVITY: ATP + 2 H(12)O = AMP + 2 phosphate.

-I-COPACTOR: Requires calcium and magnesium (By similarity).

-I-SUBUNIT: Homodimer; disulfide-linked (By similarity).

-I-SUBCLIULAR LOCATION: Integral membrane protein (Potential).

-I-SIMILARITY: Belongs to the GDAI / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN=129/SvJ;

                                                                                                                                                                                                                                                                                              diphosphohydrolase.";

U. Biol. Chem. 271:33116-33122(1996).

-! FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.

-! CATALVIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-! CATALVIIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-! CORACTOR: Requires calcium and magnesium (By similarity).

-! SUBGNIT: Homodimer; disulfide-linked (By similarity).

-! SUBCRITIVITY: Highest expression found in vascular endothelium, smooth muscle, spleen and lung.

-!- COFACTOR: Requires calcium and magnesium.
-!- SUBUNIT; Homodimer; disulfide-linked (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein (Potential).
-!- SIMILARITY: Belongs to the GDA1 / CD39 NTPase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE=971151589; PubMed=8955160; DOI=10.1074/jbc.271.51.33116; Kaczmarek E., Koziak K., Sevigny J., Siegel J.B., Anrather J., Beaudoin A.R., Bach F.H., Robson S.C.; Identification and characterization of CD39/vascular ATP diphosphohydrolase."; J. Biol. Chem. 271:33116-33122(1996)

-!- FUNCTION: In the nervous system, could hydrolyze ATP and oth nucleotides to regulate purinergic neurotransmission. Could be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (Potential). (Potential). (Potential).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            .

                                                                                                                                                                                                                J. Biol. Chem. 272:25645-23652(1997).

-I- FUNCTION: In the nervous system, could hydrolyze ATP and other nucleotides to regulate purinergic neurotransmission. Could also be implicated in the prevention of platelet aggregation. Hydrolyzes ATP and ADP equally well (By similarity).

-I- CATALYTIC ACTIVITY: ATP + 2 H(2)0 = AMP + 2 phosphate.

-I- COPACTOR: Requires calcium and magnesium (By similarity).

-I- SUBGNIT: Homodimer; disulfide-linked (Probable).

-I- SUBCILULAR LOCATION: Integral membrane protein (Potential).

-I- PTM: N-glycosylated.

-I- PTM: N-glycosylated.

```
pancreatic (AAW04339) ATPDases have been partially sequenced. The sequences have been found to be highly homologous to a human lymphoid cell activation antigen designated CD39 (Maliszenski et at. (1994). J. Immunol.: 3574-3583). The complete sequences of the ATPDases types I and II have not been obtained yet. Assuming that the CD39 gene product is an ATPDase type II, the use of CD39 in the reduction of platelet aggregation and of thrombogenicity may be contemplated, as well as a process of making ATPDases using the CD39 sequence (AAT38516)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolated ATP di.phospho:hydrolase enzymes - have anti-haemostatic activity, useful for reducing platelet aggregation and thrombogenicity.
                                                                                                                                                        ATP diphosphohydrolase, ATPDase, bovine aorta, pig pancreas, apyrase, CD39, lymphoid cell activation antigen; enzyme, platelet aggregation; thrombogenicity; anti-haemostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The bovine aorta (AAW04335 to AAW04338 and AAW04340) and porcine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           unstable angina; myocardial infarction; stroke; coronary artery disease; atherosclerosis; peripheral vascular occlusion; preeclampsia; embolism; platelet-associated ischaemic disorder; thromboric disorder; reocclusion; coagulopathy; deep venous thrombosis; DVT; pulmonary embolism; PE; thrombus formation; occlusion; stenosis; restenosis; anglogenesis; antianginal; cerebroprotective; antlarteriosclerotic; anticoagulant;
                                                                                 Non-human transgenic or somatic recombinant mammals, whose cells contain a heterologous DNA encoding a polypeptide (especially human CD39 protein) having ATP-diphesphohydrolase activity under cellular activation conditions is claimed. In particular the animal is a pig and its cells (or tissues or organs) can be used for transplantation. DNA coding for human CD39 is also useful for genetically modifying a mammalian cell to render it less susceptible to an inflammatcry or immunological stimulus and platelet aggregation. The modified cells can be used to prevent or alleviate a thrombotic condition. The present sequence is that of the human CD39 protein and was disclosed in J.Immunol. 153 (8) (1994) 3574-3584
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 180

It is derived from a human B cell line consolidation in the present of a MP-1. Soluble CD39 is constructed by removing the N- and C-terminal transmembrane domains. It retains the capacity to metabolise ATP and ADP at relevant concentrations and the ability to block and reverse ADP-induced platelet activation and recruitment, including platelet aggregation. Soluble CD39 polypeptides are useful for inhibiting angiogenesis. It is useful for the treatment of unstable angina, mycoardial infarction, stroke, coronary artery disease. Cor injury, atherosclerosis, peripheral vascular occlusion, preclampsia, embolism, platelet-associated ischaemic disorders including coronary, coronary and cerebral ischaemia, thrombotic disorders including coronary, coronary and cerebral sterey thrombosis, intracardiac and venous thrombosis, coagulopathy, deep venous thrombosis (DVT), pulmonary embolism (PE) and transient ischaemic attack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, represent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                8
                                                                                                                                                                                                                                                                                                                                        The present sequence is soluble CD39 having apyrase activity. Soluble CD39 retains the capacity of wildtype CD39 to metabolise ATP and ADP at physiologically relevant concentrations as well as the ability to block and reverse ADP-induced platelet activation and recruitment including platelet aggregation. This is used in the treatment of unstable angina, myocardial infarction, strock, coronary artery disease or injury, a therosclerosis, peripheral vascular occlusion, preeclampsia, embolism, platelet-associated ischaemia disorder including lung ischaemia, enconary ischaemia and cerebral ischaemia, thrombosis, intracardiac thrombosis, peripheral artery thrombosis, intracardiac thrombosis, peripheral artery thrombosis, intracardiac thrombosis, createry thrombosis, under thrombosis, carepty thrombosis, value consultations (DVP), pulmonary embolism (PB), cransient ischaemic artack. Soluble CD39 is also useful for preventing thrombus formation or reformation, occlusion, reocclusion, stenosis or restenosis of blood vessels or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The present sequence is the human CD39 polypeptide. The present sequence or its active fragment may be administered to treat or prevent stroke in a subject susceptible to intracranial haemorrhaging or an ischaemic disorder. The CD39 polypeptide inhibits ADP-mediated platelet aggregation or leukocyte accumulation and/or ATP by increasing ADP catabolism to the subject. It is useful for treating or preventing stroke, thrombotic disorders and ischaemic disorders such as peripheral vascular disorder, pulmonary embolus, venous thrombosis, myocardial infarction, transient ischaemic attack, unstable angina, reversible ischaemic neurological deficit and sickle cell anaemia. It is also useful for treating or preventing a stroke disorder in a subject undergoing heart surgery, lung surgery, spinal surgery, brain surgery, vascular surgery, abdominal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and

CC The invention relates to a conjugate (I) comprising an enzyme and a. biodegradable polymer, where (i) enzymatic activity of the enzyme is conjudestered to the enzyme in the absence of the blodegradable polymer, or (ii) the half life of the enzyme is longer than that of the enzyme is longer than that of the enzyme in the absence of the polymer. The enzyme is longer than that of the enzyme in the absence of the polymer. The enzyme is a multimeric, soluble and/or extracellular enzyme, preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably an apyrase, especially a soluble form of CD39 and catalyzes or preferably an apyrase, respected the confidence of extracellular nucleotides or abnormal levels of extracellular nucleotides or abnormal levels of extracellular nucleotides or abnormal levels of extracellular nucleotides or abnormal sease or injury following myccardial cancer, sepsis or a disease related to graft transplant. (I) is also used for treating coronary artery disease or injury following myccardial infarction, unstable angina, atherosclerosis, pre-eclampsia, embolism, coronary and cogullowing thrombosis, thrombotic carefulation or injured tissue surface, in combination with angioplasty, carcin or injured tissue surface, in combination with angioplasty, cardiovascular devices. The present sequence represents a human CD39 copypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SYCPYSQCAFNGIFLPPLQGDFGAFSAFYFVMKFLNLTSEKVSQEKVTEMMKKFCAQPWE 395

                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a method of treating cardiovascular disease in a subject, comprising administering an IL-17, IL-18, 4-IBB, CD30 or OX40 antagonist. The IL-17, IL-18, 4-IBB, CD30 or OX40 antagonists hre useful for treating cardiovascular disorders, e.g. (chronic immune) myocarditis, congestive heart failure, aneurysms, angina, embolism, restenosis, ischaemia or thrombocytopenic purpura. Tpresent sequence is a polypeptide used in the exemplification of the

The invention relates to novel CD39-like polypeptides (CD39-like nucleotide triphosphatase; NTPase) and nucleic acid molecules encoding such polypeptides. CD39-like polynucleotides may be used as hybridisation probes, PCR primers and in chromosome and gene mapping. Polypeptides of the invention may be used as molecular weight markers, as food supplements, in generating an antibody that specifically binds the polypeptide, as anti-thrombotic or anti-tissue graft rejection agents, or for regulating ATP neurotransmission in smooth muscle, peripheral ganglia or brain. Sequences of the invention are useful in modulating ecto-ATPase activity and for identifying compounds that modulate ecto-ATPase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New CD-19-like polypeptides and polynucleotides, useful in chromosome and gene mapping, as molecular weight markers, as food supplements, or as anti-thrombotic or anti-tissue graft rejection agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      same as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activity. The present sequence is human CD39 protein, a member of the CD39-like protein family. Note: This sequence is stated to be the same at that shown as SEQ ID NO:13 in the sequence listing of the specification. However this sequence has additional residues at its ends.
                                                                                                                                                                                                                                            CD39-like protein; gene mapping; molecular weight marker;

The present invention relates to CD39-like polypeptide and its encoding polymucleotide. The invention is useful for preventing, treating or ameliorating autoimmune deficiency disorders including connective tissue disease, multiple sclerosis, systemic lupus erythematosus, rheumatoid arthritis, autoimmune pulmonary inflammation, Guillain-Barre syndrome, autoimmune thyroiditis, insulin dependent diabetes mellitus, myasthenia gravis, grafit-versus-host disease or autoimmune inflammatory eye disease, allergic disorders including asthem and other respiratory problems, myeloid or lymphoid cell deficiencies, periodontal diseases and other tooth repair processes, inflammatory conditions including inflammatory conditions including inflammatory could insorders. The invention is also useful as an anticosquiant for inhibiting platelet aggregation, food supplement, anti-tissue graft cinhibiting platelet aggregation, food supplement, anti-tissue graft sequence is a human CD39 protein. Note: This sequence is stated to be the same as that shown as SEQ ID 13 in sequence listing, however these
                                                                                                                                                                                                                                                                                                                                                                                                                                                   the
